FNL Type 25 Thread Cutting Screws

Type 25 thread cutting screws have spaced threads with a blunt point and tapered entering threads with multiple cutting edges and chip cavities. They are intended for softer materials or thin sheet metals.

Flooring Screws

Flat Head Flooring Screws

Ideal for floorboard fastening, the flat head on these steel screws provides a flush surface in countersunk holes. Head angle is 82°. Threads are coarse and have a Type F thread point. Length is measured from top of head.

- Type F point.

Thread Rolling Screws

FNL Thread Rolling Screws

Available in an array of sizes and styles, these thread rolling screws are commonly used in plastic, wood, or other low density materials. Thread rolling screws have a trilobed shank that helps form threads into the mating material and reduce driving torque. The High-Low thread design enables the material to form around the threads and create a stronger, more secure hold, and ultimately reduce the risk of thread stripping.
